EPDM RUBBER AND SILICONE CAPS

Rubber caps made of EPDM or silicone are used not only to identify the beginning of steel wire coils but also to protect pipes, terminals, and pins during masking and painting operations. They are easy to apply and remove, reusable, and always ensure excellent protection for your products. The conical or cylindrical shape of our caps allows for adaptability to wire coils of various diameters, while their material provides high durability, elasticity, and resistance even in challenging environmental conditions. Upon your specific request, we can also customize them by printing your logo on the cap's surface.
