PALLET AND CASES

Our availability of classic wooden pallets includes all types of warehouse and handling pallets. In addition to standard models with UNI measurements, pallets can be custom-made to meet your specific requirements, with continuous or slatted decks, and can be two-way or four-way, depending on forklift entry needs. Upon request, we perform a special heat treatment, “HT” (heat treatment), to eliminate parasites.

Resin pallets are an effective solution to logistical problems encountered in any industrial or commercial setting. They are the result of studies aimed at meeting the needs of maneuverability, cost-effectiveness, robustness, and recyclability, fundamental characteristics that are increasingly at the center of interest in a market focused on product quality and processing phases. Made from synthetic resin to withstand extended use, these pallets are lightweight, rot-resistant, and maintain constant weight to be safely used with automated packaging systems. They can be stacked to minimize storage space and offer excellent electrical insulation. They are four-way entry pallets, suitable for outdoor storage, equipped with non-slip deck surface, and compatible with conveyor belts.

Designed to be impervious to acids, fats, and solvents, they can also be produced for food applications upon request. Adolfo Felisati srl also designs and manufactures custom wooden crates. For sea transportation, we provide wooden crates complete with barrier bags and desiccants. These types of packaging are the optimal solution for protecting products, ensuring significant protection during transportation.

We have a wide range of products readily available in our warehouse. Promptness and punctuality in deliveries are requirements as important as the final product guarantee.
