SPECIAL PACKAGING PAPERS

Over the years, we have expanded our catalog with a wide range of specialty papers for packaging. These materials provide protection from moisture, corrosion, or simply isolate products from external agents. Some of the main treatments include “polythene coating,” a coating process that ensures resistance and moisture insulation; “paraffin coating” which creates a barrier against moisture and grease; “bitumen coating” a treatment that provides excellent impermeability and protection against corrosive agents, making it ideal for packaging that needs to be shielded from water or other atmospheric agents. Additionally, we can reinforce any product with nets, raffia, jute, and special films, thereby increasing the material's strength. We also offer paper or plastic laminated with VCI treatment. Depending on your packaging needs, Adolfo Felisati srl will assist you in studying and proposing the best solution.

Jute polythene paper

Bituminised smooth paper

Paraffinated smooth paper

Crepe paper

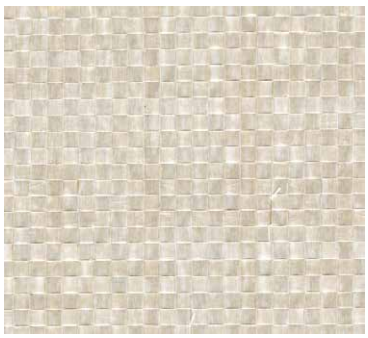

Polythene smooth paper

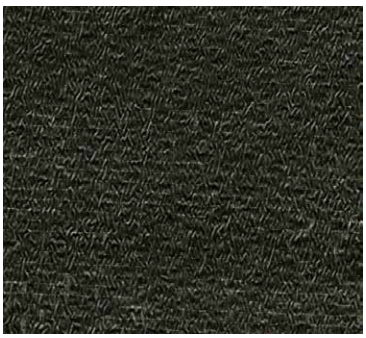

Paraffinated crepe paper

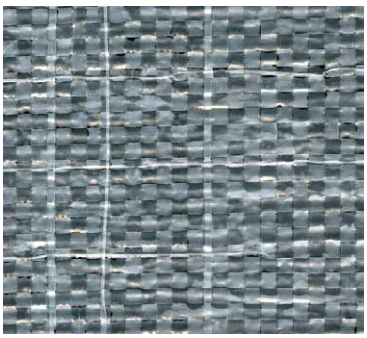

PP woven fabric laminated paper

Bituminised polythene crepe paper

PP woven fabric tar paper
