SAFETY SIGNALS

Our products related to general and safety signage are manufactured in compliance with the dimensions, shape, color, and designs required by the current laws in both the national and international markets. Our signage is made from pre-painted aluminum, digitally printed or screen-printed with oven drying. For internal office signage, we offer an elegant line in plexiglass with stainless steel spacers. We also produce photoluminescent safety signs that become luminous in the dark after exposure to natural or artificial light sources. The luminous intensity allows for good visibility in case of a blackout. Due to the variety of symbols, we invite you to contact us to request information regarding specific symbology.
