STEEL WIRE ROPE RING SLINGS

Steel wire rope ring slings are versatile lifting accessories, designed without fixed attachment points, and constructed using a flexible braided steel rope with a metallic core. These ring slings provide a reliable solution for safely handling sharp-edged steel products (beams, angles, squares) with maximum safety. They can be produced as single or double braided ring slings, allowing for lifting materials even in choke mode. The steel ropes comply with ISO 2408 standards. Upon request, we can provide slings coated with a sturdy PVC sheath to increase resistance against potential cutting risks and protect the load's surface. For every purchased lifting sling, we provide a CE Declaration of Conformity along with the user manual.

The steel wire rope slings are designed and manufactured in compliance with the following regulations:

- Machinery Directive 2006/42/EC
- UNI EN ISO 12100:2010
- UNI EN 13414-1:2009
- UNI EN 13414-2:2009
- ISO 2408

TECHNICAL SPECIFICATIONS

Single or double braided ring slings, constructed with a safety factor of 5:1, customizable in terms of rope type, diameter, capacity, length, and finish (polished or galvanized).
